

$$A_V = \frac{V_2}{V_1}$$

$$i_b = \frac{V_2}{R_{\Sigma C}} \quad i_c = B \cdot i_b \quad i_e = i_b + i_c = i_b (B+1) \quad V_{2c} = V_1 - V_2$$

$$V_2 = i_c \cdot R_E = R_E \cdot i_b (B+1) = R_E \cdot (i_b - B \cdot i_b + B \cdot i_b) = R_E \left( \frac{V_{2c}}{R_{\Sigma C}} + \frac{B V_{2c}}{R_{\Sigma C}} \right)$$

$$= R_E \cdot V_{2c} \left( \frac{1}{R_{\Sigma C}} + \frac{B}{R_{\Sigma C}} \right)$$

$$\text{krav 1: } B \gg 1 \Rightarrow \frac{B}{R_{\Sigma C}} \gg \frac{1}{R_{\Sigma C}}$$

$$\Rightarrow R_E \cdot V_{2c} \cdot \frac{B}{R_{\Sigma C}}$$

$$V_2 = (V_1 - V_{2c}) R_E \cdot \frac{B}{R_{\Sigma C}} \Rightarrow A_V = \frac{V_2}{V_1} = \frac{\frac{R_E B}{R_{\Sigma C}} \cdot \frac{R_{\Sigma C}}{B}}{1 + \frac{R_E B}{R_{\Sigma C}} \cdot \frac{R_{\Sigma C}}{B}} = \frac{R_E}{1 + R_E}$$

$$A_V = \frac{R_E}{\frac{R_{\Sigma C}}{B} + R_E}$$

$$\text{krav 2: } \frac{R_{\Sigma C}}{B} \ll R_E$$

$$A_V \approx \frac{R_E}{R_{\Sigma C}}$$

$$\approx 1 \quad \boxed{\square}$$

Hilken K. Miklasz

krav 1:  $B \gg 1$

$B$  er vanligvis i størrelsesorden

$10^2$  eller større

krav 2:  $\frac{R_{\Sigma C}}{B} \ll R_E$

$R_{\Sigma C}$  er vanligvis i størrelsesorden

$10^1$  eller mindre mens  $R_E$  er

i størrelsesorden  $10^2$  eller høyere
